DETAILED ACTION

The art unit designated for this application has changed. Applicant(s) are hereby informed that future correspondence should be directed to Art Unit 1631.

Applicant is hereby notified that the required timing for the correction of drawings has changed. See the last 6 lines on the sheet which is attached titled "Attachment for PTO-948 (Rev. 03/01 or earlier)". It is noted that a PTO Form 948 is mailed herewith. Due to the above notification Applicant is required to submit drawing corrections within the time period set for responding to this Office action. Failure to respond to this requirement may result in abandonment of the instant application or a notice of a failure to fully respond to this Office action.

Two Specie Election Requirements For All Claims:

This application contains claims directed to the following patentably distinct species of the claimed invention:

First specie election requirement:

Specie A: pharmaceutical substance effect(s) prediction without evaluating harmful side effects

Specie B: pharmaceutical substance effect(s) prediction with evaluating harmful side effects

Second specie election requirement:

Specie C: single pharmaceutical substance effect(s) evaluation

Specie D: plural pharmaceutical substance effect(s) evaluation

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, all claims are generic to the above species. This distinctness or independence of a prediction without harmful side effects versus a prediction with harmful side effects versus single pharmaceutical substance effect(s) evaluation versus plural pharmaceutical substance effect(s) evaluation is accepted as these species are directed to different entity types regarding the critical limitations therein. For pharmaceutical substance effect(s) prediction without evaluating harmful side effects, the critical feature is no side effects. For pharmaceutical substance effect(s) prediction with evaluating harmful side effects, the critical feature is harmful side effects. For single pharmaceutical substance effect(s) evaluation, the critical feature is an evaluation for a single substance. For plural pharmaceutical substance effect(s) evaluation, the critical feature is an evaluation for more than one substance which frequently includes drug interaction complications. The completely separate entity types of these species are often separately characterized and published in literature, thus adding to the search burden if all species were examined together. Thus, the species within both specie requirements are independent and/or distinct invention types for restriction purposes.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission.
